Prescribing medicines in pregnancy database

16 December 2016

This database is intended to provide information to health professionals planning the medical management of pregnant patients or patients intending to become pregnant. It is not presented as medical advice to health professionals or the public.

The use of any medicine during pregnancy requires careful consideration of both risks and benefits by the treating health professional. Any decision about taking a medicine during pregnancy should:

- involve a health professional and the patient
- take into account:
 - all available information on the medicine
 - the specific circumstances

This database must not be used as the sole basis of decision making in the use of medicines during pregnancy. The TGA does not provide advice on the use of medicines in pregnancy for specific cases. More information is available from [obstetric drug information services](http://www.tga.gov.au/obstetric-drug-information-services) ([//www.tga.gov.au/obstetric-drug-information-services](http://www.tga.gov.au/obstetric-drug-information-services)) in your State or Territory.

The database does not include all therapeutic goods, because certain types of therapeutic good are usually [exempt from pregnancy categorisation](http://www.tga.gov.au/therapeutic-goods-exempted-pregnancy-categorisation) ([//www.tga.gov.au/therapeutic-goods-exempted-pregnancy-categorisation](http://www.tga.gov.au/therapeutic-goods-exempted-pregnancy-categorisation)). Those that are included have been categorised using the [Australian categorisation system for prescribing medicines in pregnancy](http://www.tga.gov.au/australian-categorisation-system-prescribing-medicines-pregnancy) ([//www.tga.gov.au/australian-categorisation-system-prescribing-medicines-pregnancy](http://www.tga.gov.au/australian-categorisation-system-prescribing-medicines-pregnancy)). In addition to the category, the safety statement for each medicine or medicine class should be considered integral information about the medicine.

In some cases there may be discrepancies between the published Product Information and the information in this database due to the process of ongoing revision.

The pregnancy category and safety statement for some medicines that are no longer registered for use in Australia are presented in this database for information only. Likewise, the pregnancy category for medicines registered for use in men only is also presented for information purposes only.
